    <h1 style="color:white;text-align:center;">Efficient Water Analysis and Prediction using
Machine Learning </h1>
    <div style="padding:50px;">
    <font color="white" size="5" font-family="Comic Sans MS" style="padding:50px;"> Water is
considered as a
        vital resource that affects various aspects of human health and lives.
        The quality of water is a major concern for people living in urban areas.
        The quality of water serves as a powerful environmental determinant and a
        foundation for the prevention and control of waterborne diseases.
        However predicting the urban water quality is a challenging task since the
        water quality varies in urban spaces non-linearly and depends on multiple factors,
        such as meteorology, water usage patterns, and land uses, so this project aims
        at building a Machine Learning (ML) model to Predict Water Quality by considering
        all water quality standard indicators.<br /> <br><center>Technical architecture</center>
